Director of Engineering at Keeeb Inc with over 15 years of experience in the development world, initiating and building teams, architectures, and new web services.

Summary

Result-oriented and performance driven **senior engineer and experienced director / project manager** with over fifteen years of experience in development, analysis, project, and team leadership. Education enthusiast who constantly strives to learn new technologies, improve skills, and adapt to the rapidly evolving technology industry. Enthusiastic developer who stays current with industry trends. Good risk decision taking person, who quickly assess the problem, find multiple solutions, and apply the best one. Also, you can find me trail running, enjoying the nature, or reading a good mystery novel. Lately I started to learn about game development with Unreal Engine.

Accomplishments

- **Hands-on leadership**, architecture, and software development with responsibility of multiple teams of engineers working in a highly remote collaborative team at Keeeb Inc.
- Build from a scratch a **complete engineering remote team for Keeeb Inc.** composed by Backend, AI and Frontend developers who were able to successfully build Keeeb microservice architecture. Recruited over 15 new developers all over the world to build a solid team. Coached them to get a successful product.
- Lead the **architecture redesign** from the initial Keeeb Inc. monolithic architecture to a microservice architecture with more than 12 micro services, all deployed in a Kubernetes cluster and been able to scale on demand.
- Designed and implemented the full **development SDK for Keeeb Inc including API OpenAPI** (swagger) documentation, defining an API Proxy service and all the required security and connectivity.
- **Worked side-by-side with DevOps** team with the Docker and Kubernetes implementation, deployment infrastructure and the automation for Keeeb Inc.
- **Managed C level relationships** with the leadership of Keeeb and its founders / investors, leading the technology revolution @ Keeeb Inc. In constant communication with clients helping them in their Keeeb journey.
- **Led process improvements** in code organization (new branching model), CI/CD, Jira, Bitbucket workflow and testing environments.
- Lead the **technology change in Santander Bank US for the AML and Fraud team**, implementing BAE Technology (former known as Norkom Technologies), maintaining daily client contact, managing the full life cycle of the projects, and deploying into production.
- Developed and **launched three startups**:
 - Fent Pais SCLL <https://www.fentpais.cat>: Main engineer and CTO of the company for a couple of years until I took a new adventure and traveled to Boston.

- 4People Media: CTO for a crowd funding company. Company is closed now. Lead the connection with PayPal when crowdfunding was not a common thing and it required advanced PayPal APIs.
- Luodaint: self-employed for 4 years working for multiple big – medium and small companies doing custom software solution (web and mobile).
- **Lived in multiple countries** as Spain, Ireland and United States of America that made me be open-minded and open for challenges that I cannot predict, solve them, and move along. That made me be very self-confident in my problem-solving aptitudes.
